Updated!: GlassConsole version is 1.0.17, fix some minor bugs in the core events. 12/04/2006.

Warning!!!!: There is a website that is listing a crack for this software. Be ware they have load it with spyware, DO NOT USE this version, do not ask me for support if this version ruins your PC. If you need to download a copy best bet do it from here.

IMPORTANT: Current Release is 1.0.15, this was upload it at 9.55 Am EST -Nov 22.2006 Updated the link to the Help file. Next release will support screens resolutions from 800 and up, but this has made me do a major redesign on the layout!. Due on December.

Please try it this one will work with no finch.

At last!, I have finally finish the Windows GlassConsole. A fully functional windows console for the Asterisk PBX. People have always askme for an easy to use hand off linux, Asterisk Console. To be totally graphical and not having to deal with the struggle of going trough a web site or a linux prompt. Well, here it is!. GlassConsole, is a message driven console that allows you to monitor every single aspect of your Asterisk server. From active calls, conference rooms, agents , queues, channels. Not only that it gives you alarms triggers. Where you can setup alarms in real time based on events or alarms on the systems. These can be either visually on the screen , to email or to file. Every single alarm is also autoamtically log to a file. For those that use asterisk in a production environment Glassconsole is amust monitoring tool to have.

Features:

With the GlassConsole you can view:

- * Actual bridge calls.
- * Actual register phones in the system.
- * Number of CHannels being use either in Zap, Sip, Iax.
- * Number of confserence rooms and people in it.
- * Number of Agents logged in or out and time being in Queue.
- * Status on call Queues.

The single server license has the following alarms:

- * Alarms if the console is exited.
- * Alarm when the console get s started.
- * Alarm if connected to the Asterisk server.
- * Alarm if you loose connectivity to the server.
- * Alarm if a phone does not re-register in the time required.
- * Alarm if a Zap Channels goes down.
- * Alarm when a Zap Channels clears.

The following alarm are only available in the enterprise:

- * Alarm on maximun Zap channels.
- * Alarm on maximum Sip channels.
- * Alarm on maximum iax channels.
- * Alarm on minimum Agents logged in.

Requirements:

The software requirements for GlassConsole V1. are as follows:

The screen resolution needs to be 1280 x1024. Recommended a 19" monitor. Reason: There is a lot of information to be display.

Windows XP or 2005

1GB of memory RAM, more might be need it if the Asterisk Server is really busy. (A lot of simultaneous calls, or to many registered phones).

An Asterisk Server running and configure to receive Remote management connection, see Chapter.

Luis Mata

I can also customize the GlassConsole for your Company needs. Send me a line.

A single server license is \$ 499.00 to monitor one Asterisk Server from one computer

The enterprise version is \$ 999.00 License your company to monitor multiple Asterisk servers in your Domains.

To download a 15 days full feature version click on this link [GlassConsole trial version](#).

Make sure you test drive the software before you buy. There absolutetly no refunds after you purchase your licenses.

If you have technical difficulties with the last relase 1.0.14, Please post a comment, but if you do please include OS, Memory, Screen Size and how the problem occured. You can stay anonymous if you want but if you need help the only way to help you is to live a fowarding email address.
