UPDATE! : GlassNet now support loadable maps!, or images. Place your nodes ontop of your country maps or world maps. Or perhaps your favor City!. I have included continent maps samples and US maps.

Download your fully functional demo copy from : [GlassNetInstall](#)

GlassNet is a network monitoring solution, design to ease the job of the network administrator. Providing real time monitoring at the service level is an efficient tool to stay on top of the network problems. Glass Net offers the possibility to monitor several different types of devices, such as computer, network servers, routers, switches ip-phones, ip cameras. Since, Glass Net works at the port level is really easy to monitor any device that supports HTTP, FTP, POP, SMTP, SSH or as a last resource a simple ping.

GlassNet was design with expandability in mind. With the capability to support plug in, which there are already some under way, like SIP, IAX and Asterisk plug in. We have tried to keep the structure of the tool as simple an easy to use as possible, to focus more on the expandability of the tool.

Efficient enough GlassNet provides alarms in three ways: visual, email or text message to some sms gateways, and log file which can be gateways to a syslog server.

GlassNet also brings the most popular network diagnostic tools such as:

- * GlassNet Trace route.
- * GlassNet Graph-A-Ping.
- * GlassNet SipPing.
- * GlassNet Whois.

It provides efficient alarm notifications visually and also via email or to an sms gateway.

GlassNet will be also expandable to include probes for SIP, IAX and RS422.

System requirements:

- * Screen resolutions must be at least 800x600.
- * Windows XP or server.
- * At least 500 MB of ram to monitor few nodes.
- * 10MB of Hard Disk space.

The price for GlassNet is \$149.99 for a one console license to monitor up to 100 servers.
